

LS Spring Compressor Tool (part no. 67605)

Note: Be sure to use compressed air or other method to keep valves up.

This tool is used for 1 cylinder (2 springs at a time)

6. Once rocker arms are removed from cylinder being worked on, attach the large metal tool base to the cylinder head using 2 Allen head screws.
7. Next screw in the threaded stud all the way into the tool base.
8. Now place spring compressor plate over stud and valve springs. Make sure cut out is facing spring retainer.
9. Screw on small nut and tighten compressor until springs are compressed and keepers can be removed. Be careful not to pinch your fingers.
10. Once keepers are removed, loosen nut on compressor and springs can be removed.

Included is some hardware for some oddball configurations.
